

EDI CAHYADI

19.01.013.088

The image displays two sequential screenshots of the Visual Studio Code interface, demonstrating a Python script execution and modification.

Top Screenshot:

- File Explorer:** Shows a project named `BELAJAR_PYTHON` with files `app.py`, `input.py`, `pertama.py`, `string.py`, and `type_conversion.py`.
- Code Editor:** The file `string.py` is open, showing the following code:

```
1 name = "Edi Cahyadi"
2 print(name[:i])
```
- Terminal:** The terminal shows the command `python string.py` being executed, resulting in the output `Edi Cahyadi`.

Bottom Screenshot:

- Code Editor:** The file `string.py` is open, showing the modified code:

```
1 name = "Edi Cahyadi"
2 print(name[4:])
```
- Terminal:** The terminal shows the command `python string.py` being executed twice. The first run outputs `Edi Cahyadi`, and the second run outputs `Cahyadi`.
